

SOUTHERN CROSS STRATEGIC HOLDINGS PTE LIMITED*Protecting People. Securing Progress.***LOGISTICS, STORES AND
SUPPLY CHAIN MANAGEMENT POLICY****Papua LNG Project Corridor — Gulf, Western and Southern Highlands Provinces,
Independent State of Papua New Guinea**

Applicable to the Kikori Development Project, Kimu Gas Field, Barikewa Gas Field, Uramu Marine Base, associated pipeline and access corridors, and the Kerema Operational Headquarters.

Document Control	Detail
Document title	Logistics, Stores and Supply Chain Management Policy
Document number	SCSH-LOG-POL-001
Version	2.0
Classification	Company Confidential — Internal Use and Approved Client Disclosure
Policy owner	Group Manager, Logistics and Procurement
Approving authority	Chief Executive Officer, Southern Cross Strategic Holdings Pte Limited
Date of issue	____ / ____ / 2026
Effective date	____ / ____ / 2026
Next scheduled review	Twelve (12) months from the effective date
Supersedes	Logistics and Stores Policy, Version 1.0 (Kikori Development Project)

Revision History

Ver.	Date	Prepared / Reviewed by	Summary of amendment
1.0	2026	Project Logistics Supervisor	Initial issue for the Kikori Development Project.
2.0	2026	Group Manager, Logistics and Procurement	Full revision and expansion. Scope extended to all Papua LNG corridor locations; regulatory and contractual framework added; procurement thresholds, national and local content, journey management, marine, aviation, dangerous goods, business continuity, asset management and assurance provisions introduced; approval block corrected to Southern Cross Strategic Holdings Pte Limited; operating-context and security-environment provisions aligned to the 2026 project phase — the Government-led Development Forum and pre-FID mobilisation readiness — incorporated; appendices added.

1. Purpose

This Policy establishes the mandatory framework governing the planning, procurement, receipt, storage, movement, issue, accountability, maintenance and disposal of all materials, equipment, consumables and supplies used by Southern Cross Strategic Holdings Pte Limited (“SCSH” or “the Company”) in the delivery of security and support services across the Papua LNG project corridor.

The Policy exists to ensure that:

- Operational readiness is never compromised by supply failure, in an environment where resupply is constrained by weather, terrain, river conditions and community access.
- Company and client assets are fully accounted for, traceable to an individual custodian, and protected from loss, theft, misuse, deterioration and wastage.
- All expenditure is authorised, competitively sourced, documented and defensible under internal, client and statutory audit.
- The Company meets its obligations under Papua New Guinea law, the project operator’s contractor requirements, and the health, safety, security, environmental and national-content standards applicable to the Papua LNG development.

2. Policy Statement

It is the policy of Southern Cross Strategic Holdings Pte Limited that no material or asset shall enter, move within, or leave the Company supply chain without authorisation, documentation and a named accountable custodian. Logistics is treated as a controlled operational function, not an administrative one. Compliance with this Policy is a condition of employment and of engagement for every employee, contractor, subcontractor and supplier acting on behalf of the Company.

3. Scope and Application

3.1 Organisational scope

This Policy applies to all SCSH personnel, secondees, contractors, subcontractors, suppliers and visitors who requisition, handle, transport, store, issue, receive, use or dispose of Company or client property in connection with operations in Papua New Guinea.

3.2 Geographic scope

This Policy applies at all Company locations within the Papua LNG project corridor, including but not limited to:

- Kerema Operational Headquarters and central warehouse, Gulf Province.
- Kikori Development Project operational area and forward bases.
- Kimu Gas Field and associated wellpads, camps and access routes.
- Barikewa Gas Field and associated wellpads, camps and access routes.
- Uramu Marine Base and associated jetties, landing points and marine assets.
- Pipeline right-of-way, laydown yards, access roads, river landings and airstrips or helipads used in support of the above.
- Any temporary forward operating base, mobile patrol detachment or personal security detail operating away from an established location.

3.3 Material scope

This Policy governs all classes of material, including uniforms and personal kit, personal protective equipment, security and surveillance equipment, communications and information technology equipment, K9 supplies and veterinary consumables, fuel, oils and lubricants, vehicle and marine spares, camp and catering stores, medical and first-aid supplies, stationery and administrative materials, and all fixed and portable assets.

3.4 Relationship to other Company instruments

This Policy is subordinate to the Company's Corporate Governance Framework and the Zero-Tolerance Conduct, Ethics and Prohibited Behaviour Policy. It is to be read together with the Integrated Security Solutions Policy, the Border Security Policy, the K9 Operations Policy, the Lands Security Operations Policy, and all Standard Operating Procedures issued under them. Where any inconsistency arises between this Policy and a client contract, the more stringent requirement shall prevail.

4. Definitions and Abbreviations

Term	Meaning
Company / SCSH	Southern Cross Strategic Holdings Pte Limited and its subsidiaries operating in Papua New Guinea.
Client	The project operator, joint-venture participant or principal contractor to whom SCSH provides services.
EIF	Equipment Issue Form — the controlled document by which an item is issued to a named individual.
FOB	Forward Operating Base — a Company-occupied location away from the primary base of operations.
GDR	Goods Discrepancy Report — raised where delivered goods differ from the purchase order in quantity, quality or specification.
GRN	Goods Received Note — the record confirming acceptance of goods into Company custody.
JMP	Journey Management Plan — the approved plan authorising and controlling a road, river or air movement.
LDR	Loss or Damage Report — the record initiating investigation of lost, damaged or destroyed property.
MRF	Material Requisition Form — the authorised demand document initiating any procurement.
MSDS / SDS	(Material) Safety Data Sheet for a hazardous substance.
PM	Project Manager — the senior SCSH manager accountable for a designated operational area.
PO	Purchase Order — the Company's binding commitment to a supplier.
PPE	Personal Protective Equipment.
Sensitive item	Any item that is attractive to theft, capable of misuse, or the loss of which would create an operational, reputational or legal exposure.

Term	Meaning
Stock Register	The master record of all inventory held, by item code, location and quantity.

5. Legislative, Regulatory and Contractual Framework

Company logistics activity is conducted in conformity with the applicable laws of the Independent State of Papua New Guinea, the requirements of the Papua LNG project operator and its contractors, and recognised international good practice. The instruments considered in the preparation of this Policy include, without limitation:

5.1 Papua New Guinea legislation and regulation

- Oil and Gas Act 1998 and subordinate regulations, including the National Content Plan requirements applicable to petroleum projects.
- Environment Act 2000 and associated permitting, waste and spill-reporting requirements.
- Industrial Safety, Health and Welfare Act and associated regulations governing workplace safety, storage and manual handling.
- Customs Act and Excise legislation governing importation, temporary importation, bonded storage and clearance of project materials.
- Motor Traffic Act and Road Traffic Rules governing vehicle registration, licensing, roadworthiness and load restraint.
- Merchant Shipping Act and National Maritime Safety Authority requirements governing vessel survey, crewing, safety equipment and small-craft operations.
- Civil Aviation Act and Civil Aviation Safety Authority rules governing charter operations and the carriage of dangerous goods by air.
- Security (Protection) Industry Act and licensing conditions applicable to the provision of security services.
- Firearms Act, where any regulated item is held under licence; the Company's default posture is unarmed unless expressly authorised in writing.

5.2 Client, project and international standards

- The project operator's Contractor HSE, Security and Logistics Bridging Documents, site access rules, and journey management requirements.
- The commitments arising from the Government-led Papua LNG Development Forum, convened in 2026 as a statutory precondition to the project's Final Investment Decision, including undertakings on landowner participation, benefit sharing, local business development and community benefit.
- IFC Performance Standards on Environmental and Social Sustainability, in particular those relating to resource efficiency, community health and safety, and supply chain management.
- The Voluntary Principles on Security and Human Rights.
- ISO 9001 (quality management), ISO 45001 (occupational health and safety) and ISO 14001 (environmental management) as the Company's reference standards for logistics process control.
- UN Recommendations on the Transport of Dangerous Goods, the IMDG Code and IATA Dangerous Goods Regulations, as applicable to the mode of carriage.

6. Guiding Principles

All logistics decisions shall be governed by the following principles, in the order stated where they conflict:

Principle	Application
Safety first	No delivery schedule, cost saving or client expectation justifies an unsafe movement, an unsafe lift, an unsafe storage arrangement or an unsafe journey.
Accountability	Every item has an owner, a record and a signature. Unrecorded stock does not exist; unrecorded issue is a loss.
Transparency	Every transaction is capable of being reconstructed from documents by a person who was not present.
Readiness	Stock levels are set by operational requirement and resupply lead time, not by convenience.
Integrity	Procurement is decided on merit. Gifts, inducements, undisclosed interests and preferential dealing are prohibited absolutely.
Local benefit	Where quality, safety and price permit, purchasing preference is given to Gulf Province and landowner-affiliated suppliers.
Stewardship	Company and client property is held in trust. Waste, neglect and misuse are treated as breaches of trust, not as minor administrative faults.

6.1 Values foundation

Consistent with the values of the Company, personnel entrusted with the custody of property are expected to exercise faithful stewardship in matters both large and small, recognising that reliability in small responsibilities is the measure of fitness for greater ones. Honesty in the handling of stores is therefore regarded as a matter of character before it is a matter of procedure.

7. Governance, Accountability and Delegation

7.1 Accountability matrix

Role	Logistics accountabilities
Chief Executive Officer	Approves this Policy; approves capital acquisitions and write-offs above the delegated limit; appoints Boards of Inquiry for major losses.
Group Manager, Logistics and Procurement (HQ)	Owns this Policy; sets standards, item coding and stock policy; controls supplier prequalification; conducts HQ assurance audits; approves inter-site transfers.
Project Manager (per site)	Overall accountability for logistics performance and asset security in the operational area; approves Material Requisition Forms; authorises emergency purchases; chairs monthly stock reconciliation; approves disposals within delegation.
Project Logistics Supervisor	Day-to-day control of logistics execution, journey management, fleet, fuel and reporting; supervises stores personnel; maintains the site logistics plan.
Stores Officer / Quartermaster	Custodian of all stores; performs receipt, inspection, binning, issue, return, cycle counting and record maintenance; raises GDRs and LDRs.
Transport Coordinator	Allocates vehicles and vessels; maintains movement logs, IVMS records and maintenance schedules; verifies driver and coxswain licensing and fitness.

Role	Logistics accountabilities
Purchasing Officer (HQ)	Sources quotations, raises purchase orders, manages supplier communications, customs clearance and freight forwarding.
Finance Officer	Verifies budget availability, matches invoice to purchase order and goods received note, and releases payment; maintains the fixed asset register.
HSE Officer	Assures storage, handling, dangerous goods, waste and journey risk controls; participates in stores inspections.
All personnel	Care for issued property; report loss, damage or defect immediately; comply with issue, return and journey procedures.

7.2 Segregation of duties

The functions of requisition, approval, purchase, receipt and payment shall be performed by different individuals. No person may approve their own requisition, receive goods against a purchase order they raised, or authorise payment for goods they received. Where site manning makes full segregation impracticable, compensating controls shall be documented and approved in writing by the Project Manager and notified to HQ.

7.3 Delegation in absence

Any delegation of a logistics authority during leave, medical evacuation or absence shall be recorded in writing, limited in duration, and copied to HQ. Verbal delegation is valid only for the duration of a declared emergency and shall be confirmed in writing within twenty-four (24) hours.

8. Logistics Organisation and Structure

The logistics function is structured on a hub-and-spoke model, with the Kerema Operational Headquarters acting as the primary receipt, consolidation and distribution hub for all corridor locations.

Level	Function
Group Manager, Logistics and Procurement (HQ, Kerema)	Policy, standards, consolidated procurement, supplier management, assurance.
Purchasing and Customs Cell (HQ)	Sourcing, purchase orders, freight forwarding, customs and port clearance, supplier payment support.
Central Warehouse (Kerema)	Bulk receipt, inspection, holding of corridor reserve stock, consolidation of site consignments.
Project Logistics Supervisor (per site)	Site logistics execution, journey management, fleet, fuel, forward stock.
Site Stores (Kikori, Kimu, Barikewa, Uramu)	Site inventory custody, issue and return, cycle counting, local reporting.
Transport, Marine and Aviation Coordination	Road convoys, river and coastal craft, charter and helicopter manifesting.

Site stores are held accountable to the Project Manager for operational performance and to the Group Manager, Logistics and Procurement for functional standards and record integrity.

9. Operational Logistics Profile — Papua LNG Corridor

9.1 Environmental and Access Characteristics

Logistics planning shall expressly account for the operating environment of the corridor. The following characteristics are to be treated as planning assumptions rather than exceptions:

- Multi-modal resupply. Most locations are reached by a combination of coastal or river craft, light vehicle or truck, and rotary or fixed-wing charter. Single-mode planning is not acceptable.
- Seasonal disruption. High rainfall, river flooding, silting at landings, coastal swell and reduced flying weather routinely interrupt resupply. Stock policy shall reflect a worst-case resupply interval, not an average one.
- Limited local sourcing. Specialist security, communications and PPE items are generally not available in Gulf Province and require lead time from Port Moresby or offshore.
- Community and landowner interface. Road, river and landing access may be affected by community grievance, compensation disputes or customary land access. Movements shall be planned in coordination with the Community Affairs and Security functions.
- Security exposure. Materials in transit are attractive targets. Fuel, communications equipment, tools and rations require escort, sealing and reconciliation on arrival.
- Cold chain and shelf life. Medical supplies, vaccines, K9 veterinary items and perishable rations require temperature control and expiry management in a high-humidity tropical environment.

9.2 Security Operating Environment (2026)

Logistics activity in the corridor is conducted within the prevailing law-and-order environment of Papua New Guinea and is planned on the following security assumptions. These assumptions apply in addition to, and do not displace, the client's security requirements or the Company's Integrated Security Solutions Policy:

- Firearms proliferation and armed criminality. The availability of high-powered firearms in parts of the country, and the emergence of organised armed groups available for hire, mean that materials in transit — particularly fuel, vehicles, communications equipment and tools — may be deliberately targeted. Overland and riverine movements shall be planned on the basis that an armed threat to a convoy is credible on higher-risk routes, rather than treated as a remote contingency.
- Highway, corridor and route exposure. Sections of the national road network, including routes through or adjacent to the Highlands, have been subject to ambush, roadblock and opportunistic robbery. Route selection, timing, escort and communications shall be determined from a current route-security assessment agreed with the Security function and the client, and shall not rely on historical practice or local assurance alone.
- Community, landowner and benefit-sharing sensitivities. During the Development Forum and the pre-Final Investment Decision period, landowner and community expectations regarding benefit sharing, employment and local contracting are heightened. Access to roads, river landings, laydown yards and airstrips may be interrupted by grievance, compensation dispute or demonstration; movement plans shall include community-interface contingencies and pre-identified holding points.
- Coordination with State security agencies. Movements requiring armed escort, or facing an elevated threat, shall be coordinated with the Royal Papua New Guinea Constabulary and, where applicable, the Papua New Guinea Defence Force, through the arrangements established

in the client's security bridging documents and the Company's Integrated Security Solutions Policy.

- Primacy of caution over schedule. The Company's ability to move safely depends on conditions it does not control. Where the law-and-order, community or weather situation on a route or at a location deteriorates, the default logistics posture is to suspend non-essential movement and hold, and to resume only on a documented reassessment. No delivery commitment justifies accepting an avoidable security risk.

9.3 Site Logistics Annex

Each site shall maintain a Site Logistics Annex to this Policy recording its access routes, landing points, tidal and river constraints, helipad load limits, storage capacity, minimum stock holdings and resupply cycle. The Annex shall be reviewed quarterly by the Project Manager.

10. Demand Planning and Forecasting

Procurement shall be driven by forecast requirement rather than by reaction to shortage.

- Each site shall submit a rolling ninety (90) day materials forecast to HQ by the twenty-fifth (25th) day of each month, based on manning levels, rotation cycles, contract scope and planned operations.
- Consumption rates for uniforms, PPE, fuel, rations and K9 supplies shall be reviewed quarterly against actual issue data and the forecast adjusted accordingly.
- Mobilisation, demobilisation, manpower surges and new task orders shall trigger an immediate out-of-cycle forecast revision.
- Reorder points shall be calculated as average consumption over the maximum credible resupply lead time, plus a safety margin of not less than thirty (30) per cent for corridor sites.

11. Procurement

11.1 Requisition

All procurement shall commence with a Material Requisition Form (MRF) raised by the requesting supervisor, specifying item description, item code, quantity, technical specification, required delivery date, delivery location and cost centre. The MRF shall be approved by the Project Manager and verified for budget availability by the Finance Officer before any commitment is made to a supplier.

11.2 Competitive sourcing

- Three (3) written quotations shall be obtained for all purchases above the threshold set in Appendix B.
- Where three quotations cannot be obtained, a Single Source Justification shall be prepared by the Purchasing Officer and approved by the Group Manager, Logistics and Procurement, recording the reason, the market enquiry undertaken and the basis on which value for money is asserted.
- Quotation evaluation shall consider whole-of-life cost, delivery lead time to the point of use, warranty and after-sales support in country, and compliance with technical and safety specification — not price alone.
- Splitting a requirement into smaller orders to avoid an approval threshold is a disciplinary offence.

11.3 Purchase orders

No supplier shall be instructed to supply goods or services without an approved Purchase Order bearing a unique reference, agreed price, delivery terms, delivery location and payment terms. Retrospective purchase orders are prohibited except where issued to regularise an approved emergency purchase.

11.4 Emergency procurement

An emergency purchase may be authorised verbally by the Project Manager only where a delay would create a risk to life, a breach of a client contractual obligation, or the failure of an essential operation. The authorisation shall be confirmed by written justification within twenty-four (24) hours, supported by a Purchase Order raised within forty-eight (48) hours, and reported in the

monthly procurement summary. Repeated recourse to emergency procurement at a site shall be treated as a planning failure and investigated.

11.5 Ethical procurement and conflict of interest

- No employee may solicit, accept or offer any gift, hospitality, commission, facilitation payment or other benefit in connection with a procurement decision.
- Any personal, family, customary, clan or financial interest in a supplier or prospective supplier shall be declared in writing to the Project Manager and the Group Manager, Logistics and Procurement before participating in any sourcing decision, and shall be recorded in the Conflict of Interest Register.
- Procurement decisions and their supporting evaluation shall be documented so that the reasoning is capable of independent review.
- Breach of this clause is a serious misconduct matter under the Zero-Tolerance Conduct, Ethics and Prohibited Behaviour Policy and may constitute an offence under Papua New Guinea law.

11.6 Importation and customs

Imported materials shall be cleared through a licensed customs broker. The Purchasing Officer shall maintain the import file, including the commercial invoice, packing list, bill of lading or air waybill, import declaration, duty and GST assessment and, where applicable, project concession or temporary importation documentation. Temporarily imported equipment shall be tracked to ensure re-export within the permitted period.

12. Supplier Prequalification and Performance Management

12.1 Prequalification

Suppliers shall be entered on the Approved Supplier Register only after prequalification against the following criteria:

Criterion	Evidence required
Legal standing	IPA registration certificate, tax identification number, GST registration, relevant trade or operating licences.
Financial capacity	Trading history, bank details verified independently of email instruction, capacity to sustain supply.
Technical capability	Product specification and certification, particularly for PPE, lifting equipment and safety-critical items.
Delivery capability	Demonstrated ability to deliver into Gulf Province and the corridor, or to the nominated consolidation point.
HSE and labour standards	Safety record, absence of forced or child labour, compliance with PNG employment law.
Integrity	Declaration of beneficial ownership, absence of undisclosed connection to Company personnel, anti-bribery undertaking.

12.2 Performance monitoring

- Supplier performance shall be scored quarterly on delivery reliability, specification compliance, defect and rejection rate, responsiveness and pricing stability.

- Persistent non-performance shall result in formal notice, suspension from the register, or removal, as determined by the Group Manager, Logistics and Procurement.
- Any supplier attempting to induce a Company employee shall be removed from the register immediately and the matter escalated to the Chief Executive Officer.

12.3 Payment integrity

Changes to supplier bank details shall be verified by telephone or in person with a previously known authorised contact before any payment is released. Verification by return email is not acceptable. Payment shall be released only on a three-way match of Purchase Order, Goods Received Note and invoice.

13. National Content and Landowner Participation

The Company supports the national content objectives of the Papua LNG development and the commitments given in respect of landowner and Gulf Province business participation.

- Where price, quality, safety specification and delivery reliability are broadly comparable, preference shall be given to Papua New Guinean suppliers, and within that group to Gulf Province and landowner-affiliated businesses in the project-impacted areas.
- The Purchasing Officer shall maintain a National Content Report recording the value and proportion of procurement placed with national, provincial and landowner-affiliated suppliers each quarter.
- Preference shall not be applied where it would compromise safety-critical specification, create an unmanaged conflict of interest, or fail to represent value for money; the reason for any such decision shall be documented.
- The Company shall, where practicable, provide capability support to local suppliers on invoicing, specification compliance and safety documentation, so that participation is real rather than nominal.
- The Company shall track its national-content performance in a manner consistent with the benefit-sharing, landowner-participation and local-contracting commitments confirmed through the 2026 Development Forum, and shall be able to demonstrate that performance to the client and the State on request.

14. Receipt, Inspection and Acceptance of Goods

14.1 Verification on receipt

All incoming materials shall be inspected by the Stores Officer, in the presence of the carrier where practicable, against the Purchase Order and delivery documentation for:

- Quantity received against quantity ordered and quantity stated on the delivery docket.
- Condition, including transit damage, water ingress, tampering and seal integrity.
- Correct specification, part number, size, certification and batch or serial number.
- Packaging integrity, labelling, shelf life and expiry date, and presence of Safety Data Sheets for hazardous goods.
- Calibration and test certification for lifting, electrical, gas-detection and other safety-critical equipment.

14.2 Documentation

The receipt file shall contain the Purchase Order, delivery docket or consignment note, supplier invoice, inspection checklist and Goods Received Note. A Goods Received Note shall be raised for every receipt, including free-issue, client-furnished, transferred and donated items.

14.3 Discrepancies and rejection

- Any shortage, excess, damage or specification failure shall be reported within twenty-four (24) hours on a Goods Discrepancy Report and notified to the Purchasing Officer and the supplier.
- Rejected goods shall be quarantined in a designated area, clearly marked, and shall not be issued under any circumstance pending resolution.
- Discrepancies with a security dimension — broken seals, evidence of tampering, missing sensitive items — shall additionally be reported immediately to the Project Manager and the security duty officer.

15. Warehousing and Stores Management

15.1 Storage standards

- Stores shall be segregated by commodity class: uniforms and textiles; PPE; electronics and communications; batteries; K9 supplies and veterinary items; medical supplies; rations and catering stores; tools and spares; fuel, oils and lubricants; chemicals and hazardous substances.
- Incompatible materials shall not be co-located. Fuels, oxidisers, corrosives, compressed gases and foodstuffs shall be stored separately in accordance with their Safety Data Sheets.
- All storage shall be racked or palletised, clear of the floor, with a minimum aisle clearance permitting safe access and emergency egress. Stacking heights shall not exceed rack rating or create a manual handling hazard.
- Buildings shall be weatherproof, ventilated, vermin-proofed and, where required for electronics, medical items or K9 veterinary supplies, climate-controlled. Humidity control is mandatory for optics, radios and thermal equipment.
- Firefighting equipment appropriate to the stored commodity shall be installed, inspected monthly and recorded. Emergency exits, assembly points and spill kits shall be signed and unobstructed.
- High-value and sensitive items shall be held in a locked cage or strongroom within the store, under separate key control.

15.2 Housekeeping and inspection

The Stores Officer shall conduct a documented weekly housekeeping and safety inspection. The HSE Officer shall conduct a documented monthly inspection covering fire, spill, manual handling, dangerous goods segregation and expiry control. Findings shall be tracked to closure in the site action register.

16. Inventory Control and Stock Accounting

16.1 Item coding and records

- Every stocked item shall carry a unique Company item code and a defined unit of issue. Uncoded stock shall not be accepted into store.
- The Stock Register shall record item code, description, unit of issue, bin location, quantity on hand, reorder point, maximum holding, batch or serial number, and expiry date where applicable.
- Where an electronic inventory system is in use, a printed or exported backup shall be produced weekly and retained, recognising the risk of connectivity and power loss at remote sites.

16.2 Counting regime

Frequency	Requirement
Weekly	Cycle count of all sensitive, high-value and fast-moving items by the Stores Officer; result recorded and signed.
Monthly	Full stock count and reconciliation, witnessed and countersigned by the Project Manager; variance report submitted to HQ.

Frequency	Requirement
Quarterly	Independent audit by HQ Logistics, including verification of the fixed asset register and physical inspection of serialised items.
Annually	Full physical inventory and asset verification supporting the Company financial accounts, with external audit participation where required.
On handover	Complete count and formal handover certificate signed by the outgoing and incoming Stores Officer. No custodian shall depart the site before handover is complete.

16.3 Variance management

All variances shall be investigated and explained; they shall not be adjusted out of the record. Variances shall be classified as clerical error, damage, expiry, unrecorded issue, or suspected loss or theft. Any variance in a sensitive item, and any variance exceeding the value threshold in Appendix B, shall be reported to HQ within twenty-four (24) hours and may trigger a Board of Inquiry.

16.4 Stock rotation and shelf life

First-in, first-out rotation shall be applied to all date-sensitive stock. Items within ninety (90) days of expiry shall be flagged in the monthly report. Expired PPE, medical items, veterinary supplies and rations shall be quarantined immediately and shall never be issued.

17. Issue, Return and Recovery of Items

17.1 Issue

- No item shall leave the store without an Equipment Issue Form signed by both the Stores Officer and the recipient. The recipient's signature constitutes personal accountability for the item.
- Uniform and PPE issue shall follow the Personal Kit Matrix at Appendix C, scaled to role, location and season.
- Serialised items — radios, satellite communications devices, night vision and thermal equipment, body-worn cameras, laptops, GPS units — shall be issued against serial number and recorded on the individual's personal accountability record.
- K9 consumables, feed and veterinary items shall be recorded against the individual dog's file and reconciled with the K9 handler's daily record.

17.2 Return, exchange and demobilisation

- Serviceable items shall be returned to store on rotation, reassignment, demobilisation or termination. A clearance certificate shall be issued only when all accountable items are returned or formally written off.
- Damaged, worn or defective items shall be returned and exchanged on a one-for-one basis; the defective item shall be surrendered before a replacement is issued.
- Final pay and clearance shall not be processed until the Stores Officer has certified return of all issued property, subject to the recovery provisions of the employment contract and applicable law.

17.3 Loss and damage

Loss, theft, damage or destruction of any Company or client property shall be reported by the custodian to the Project Manager and Stores Officer immediately and in any event within twenty-four (24) hours, on a Loss or Damage Report. The Project Manager shall determine whether the loss arose from fair wear and tear, operational circumstance, negligence or misconduct. Findings of negligence or misconduct may result in disciplinary action and recovery of value, and findings of suspected criminal conduct shall be referred to the Royal Papua New Guinea Constabulary.

18. Controlled, Sensitive and High-Value Items

The following classes of item are designated sensitive and are subject to enhanced control: communications and satellite equipment; night vision, thermal and optical equipment; surveillance, CCTV and recording equipment; computers and data storage media; medical supplies including controlled pharmaceuticals; fuel; keys, access cards and seals; uniforms, insignia and identification media; and any regulated item held under licence.

- Sensitive items shall be held in a secure cage or strongroom, with access limited to named custodians.
- A separate Sensitive Items Register shall record serial number, custodian, issue date, return date and physical verification date.
- Sensitive items shall be physically sighted and verified weekly, and at every change of custodian or shift handover where operationally held.
- Uniforms, insignia, identification cards and Company branding are security-sensitive because of their potential for impersonation. Withdrawn, worn or surplus items shall be destroyed under witness and the destruction recorded.
- Data-bearing devices shall be sanitised in accordance with the Company information security requirements before disposal or transfer.

19. K9 Logistics Support

Where K9 capability is deployed, logistics support shall be planned as a dedicated stream and shall not be treated as general consumable supply.

- A minimum reserve of thirty (30) days of veterinary-approved feed shall be held at each K9 location, protected from moisture, heat and vermin.
- Veterinary consumables, vaccines and medications shall be stored under controlled temperature with a maintained cold chain, and a temperature log shall be kept.
- Kennel consumables, disinfectants, bedding, leads, harnesses, muzzles, cooling equipment and transport crates shall be held to the scale set in the K9 Operations Policy.
- All K9 consumption shall be recorded against the individual dog's file to support veterinary review, welfare assurance and cost allocation.
- K9 movement by vehicle, vessel or aircraft shall be planned in advance, with crate, ventilation, water and heat-stress controls specified in the Journey Management Plan.

20. Fuel, Oils and Lubricants Management

20.1 Storage

- Fuel shall be stored only in approved, labelled, bunded tanks or approved containers, sited away from accommodation, ignition sources and watercourses.
- Bunding shall have a capacity of not less than one hundred and ten (110) per cent of the largest container stored, and shall be kept free of accumulated rainwater.
- Spill kits, absorbent material, fire extinguishers and Safety Data Sheets shall be available at every fuel point, and personnel shall be trained in their use.
- No smoking, hot work or unauthorised access shall be permitted within the designated fuel area.

20.2 Issue and reconciliation

- Every issue shall be recorded in the Fuel Logbook with date, time, vehicle or vessel or plant identity, odometer or hour-meter reading, quantity issued, and the signature of the drawing operator and the issuing officer.
- Tank dips shall be taken and recorded daily. Book stock shall be reconciled to physical dip weekly, and any variance exceeding the tolerance in Appendix B shall be investigated and reported.
- Fuel consumption shall be monitored against kilometres travelled or hours run, by asset. Consumption outside the established norm shall be investigated for mechanical fault, leakage or misappropriation.
- Fuel is a high-risk theft commodity in the corridor. Fuel areas shall be locked, lit and, where practicable, under camera surveillance, and keys shall be under strict control.

20.3 Environmental control

All spills, however small, shall be contained, cleaned up, recorded and reported in accordance with the Environment Act 2000 and the client's environmental incident reporting requirements. Contaminated soil and absorbents shall be handled as regulated waste.

21. Land Transport and Fleet Management

21.1 Authorisation to drive

- Only personnel holding a valid Papua New Guinea licence of the correct class, who have completed the Company defensive driving assessment and site induction, and who are named on the Authorised Drivers Register, may operate a Company vehicle.
- Driving under the influence of alcohol or drugs, use of a hand-held mobile telephone while driving, and carriage of unauthorised passengers are prohibited absolutely.
- Fatigue limits shall be observed. Continuous driving shall not exceed four (4) hours without a break, and daily driving hours shall be capped in accordance with the client journey management standard.

21.2 Vehicle use and control

- All movements shall be recorded in the Vehicle Movement Log, showing driver, purpose, destination, departure and return times, and odometer readings.
- Private use of Company vehicles is prohibited unless expressly authorised in writing.
- Where fitted, in-vehicle monitoring systems shall be operational at all times; disabling or interfering with a monitoring device is a disciplinary offence.
- Loads shall be restrained in accordance with load-restraint requirements; unsecured loads and carriage of passengers on open trays or on top of cargo are prohibited.

21.3 Maintenance and roadworthiness

- A documented pre-start inspection shall be completed by the driver before first use each day; defects shall be reported immediately and defective vehicles removed from service.
- Scheduled servicing shall be performed every five thousand (5,000) kilometres or at the manufacturer's recommended interval, whichever is the shorter, and recorded in the vehicle history file.
- Registration, insurance and inspection currency shall be tracked centrally and renewed before expiry.

21.4 Mandatory vehicle equipment

Category	Minimum requirement
Safety	First aid kit, fire extinguisher (serviced and in date), wheel chocks, warning triangles, high-visibility vests.
Recovery	Serviceable spare wheel, jack, wheel brace, tow strap, shovel; recovery tracks for wet-season operation.
Communications	Two-way radio or satellite communications device where mobile coverage is absent; charged handset and vehicle charger.
Documentation	Registration and insurance documents, journey management plan, vehicle logbook, emergency contact card.
Consumables	Drinking water, spare fuel where authorised and correctly stowed, insect repellent, torch.

22. Journey Management

No road, river or air movement shall be undertaken without an approved Journey Management Plan appropriate to the assessed risk of the route.

- The Plan shall record route, departure and expected arrival times, personnel and cargo manifest, communications schedule and check-in points, alternate routes and safe havens, and the overdue action to be taken if a check-in is missed.
- Journeys shall be authorised by the Project Logistics Supervisor and, for high-risk routes, by the Project Manager in consultation with the Security function.
- Night driving is prohibited outside secured areas except where authorised in writing by the Project Manager on the basis of a documented risk assessment, and for medical or security emergencies.
- Movements shall be suspended where the security, community or weather situation on the route deteriorates. A journey may be cancelled by any person with cause; no employee shall be penalised for refusing an unsafe journey.
- A control room or nominated duty officer shall track all movements to completion and initiate overdue vehicle procedures without delay.
- Convoy discipline, spacing, lead and rear vehicle responsibilities and actions-on for breakdown, blockade, accident or ambush shall be briefed before departure.
- On routes assessed as higher-risk, convoy composition, escort, spacing, communications and actions-on shall reflect the current threat and shall be authorised by the Project Manager in consultation with the Security function. Single-vehicle movement on such routes is prohibited except in a declared emergency.
- Where a movement requires coordination with the Royal Papua New Guinea Constabulary, the Papua New Guinea Defence Force or a client escort, that coordination shall be arranged and confirmed before departure, and the Journey Management Plan shall record the escort, its communications, and the fallback arrangement if the escort becomes unavailable.

23. Marine and Inland Waterway Logistics

Marine and river movement in support of the Uramu Marine Base and riverine locations shall be conducted under the following controls:

- Vessels shall be registered and surveyed as required by the National Maritime Safety Authority, and shall be operated only by qualified and Company-assessed coxswains.
- A lifejacket of the correct size and serviceable condition shall be worn by every person on board at all times. There is no exception to this requirement.
- Vessels shall carry a functioning communications device, spare fuel correctly stowed, anchor and line, bailer, paddle, torch, first aid kit, flares or approved distress signal, and drinking water.
- Passenger and cargo loading shall not exceed the vessel's rated capacity; freeboard shall be maintained and cargo evenly distributed and secured.
- A float plan, being the marine equivalent of a Journey Management Plan, shall be lodged before departure and closed on arrival.
- Movements shall be planned against tide, swell, river level, log debris and daylight. Night transits are prohibited except in emergency.
- Fuel and hazardous cargo carried by vessel shall be securely stowed, segregated from passengers, and manifested.

24. Aviation and Air Charter Logistics

- All charter aircraft and helicopter operators shall hold a current Air Operator Certificate and shall be approved by the Company and, where required, by the client, before use.
- An accurate passenger and cargo manifest, including individual weights, shall be prepared for every flight and retained. Falsification of a manifest is a serious disciplinary offence.
- Payload, sling load and helipad limitations shall be observed absolutely; loads shall be prepared, weighed and certified before presentation to the aircraft.
- Dangerous goods shall not be presented for carriage by air except by trained and current personnel, correctly classified, packed, marked, labelled and declared in accordance with IATA Dangerous Goods Regulations.
- Helipads and landing sites shall be inspected, marked, secured from unauthorised access and cleared of loose material before each movement.

25. Dangerous Goods and Hazardous Materials

- A Hazardous Substances Register shall be maintained at each location, listing every hazardous substance held, its quantity, storage location and current Safety Data Sheet.
- Safety Data Sheets shall be held in hard copy at the point of storage and shall be accessible to all personnel and to emergency responders.
- Personnel handling hazardous materials shall be trained in their hazards, the required PPE, spill response and first aid measures.
- Dangerous goods shall be transported in compliance with the requirements applicable to the mode of carriage, correctly segregated, labelled, placarded where required, and accompanied by transport documentation.
- Compressed gas cylinders shall be stored upright, restrained, with valve protection fitted, segregated by gas type, and secured against unauthorised access.

26. Camp, Catering and Life Support Stores

- Food stores shall be maintained at temperatures appropriate to the commodity, with daily temperature logs for chilled and frozen storage and documented action on excursion.
- Dry stores shall be racked clear of the floor and walls, vermin-proofed, and rotated on a first-in, first-out basis.
- Potable water shall be sourced, treated, tested and recorded in accordance with the site water management arrangements; test results shall be retained.
- Accommodation stores, bedding, mosquito nets, cleaning materials and hygiene consumables shall be held to an established scale of issue per occupied bed space.
- Generator fuel, spares, filters and lubricants shall be held to a minimum of thirty (30) days' consumption at remote locations.

27. Medical and Emergency Response Stock

- Each location shall hold a medical stock scale approved by the Company medical adviser, appropriate to its manning, isolation and evacuation timeline.

- Medical consumables shall be subject to expiry control, with items within ninety (90) days of expiry reported monthly and expired items withdrawn immediately.
- Controlled pharmaceuticals shall be held in a locked cabinet under the sole custody of a qualified medical practitioner or nurse, with a register recording every administration and disposal.
- First aid kits in vehicles, vessels and work areas shall be inspected monthly, restocked and sealed, with the inspection recorded.
- Emergency response equipment, including stretchers, spinal boards, oxygen, snake-bite provisions and evacuation kits, shall be verified serviceable weekly.
- Malaria prophylaxis, insect repellent, oral rehydration and heat-illness provisions shall be maintained as standing stock in view of the corridor's tropical disease and heat exposure profile.

28. Security of Stores and Assets

- Stores shall be locked whenever unattended. Access shall be restricted to named authorised personnel recorded on an access list approved by the Project Manager.
- Key and access-card control shall be managed through a Key Register, with issue and return signed for and a documented weekly key muster.
- CCTV coverage shall be installed at store entrances, fuel points and high-value storage areas where power and infrastructure permit, and recordings retained in accordance with the Company retention schedule.
- A security guard shall be posted at store and fuel installations during hours of darkness and at all times where high-value stock is held.
- Visitors and non-store personnel shall not enter storage areas unescorted.
- Vehicles and vessels departing a site with cargo shall be manifested; random exit checks shall be conducted and recorded.
- Any suspected theft, unauthorised access, tampering with seals or falsification of a stores record shall be reported immediately to the Project Manager and treated as a security incident, not merely a stock discrepancy.

29. Health, Safety and Environmental Requirements

- Manual handling assessments shall be applied to routine store tasks; mechanical aids shall be provided where loads exceed safe manual limits.
- Only trained and certified operators shall use forklifts, pallet jacks, cranes or other lifting equipment. Lifting gear shall be inspected, colour-coded and certified within its currency period.
- Personnel working in stores shall wear the PPE prescribed for the task, including safety footwear, gloves, eye protection and high-visibility clothing where required.
- Heat stress, dehydration and vector-borne disease controls shall be applied to all outdoor and yard work, with shaded rest, water and work-rest cycles.
- Every logistics incident, injury, near miss, spill and vehicle or marine event shall be reported through the Company incident reporting system within the timeframes prescribed by the client bridging document.
- Environmental protection measures — spill containment, bunding, waste segregation, prohibition on riverine discharge — apply to all logistics activity without exception.

30. Waste Management and Disposal

- Waste shall be segregated at source into general, recyclable, hydrocarbon-contaminated, chemical, medical and electronic waste streams.
- Regulated wastes shall be disposed of only through a licensed contractor, with disposal certificates or consignment notes retained as evidence of lawful disposal.
- Burning, burial or riverine disposal of waste is prohibited except where expressly permitted by the client's approved environmental management plan.

- Expired, damaged or obsolete equipment shall be recorded, quarantined and disposed of under an approved Asset Disposal Form authorised by the Project Manager, and above the delegated value by the Chief Executive Officer.
- Disposal of uniforms, insignia, identification media and data-bearing devices shall be by destruction under witness, with a signed destruction certificate.
- The proceeds of any sale of surplus assets shall be receipted to the Company and shall not be retained, applied locally or distributed by site personnel.

31. Asset Management and Fixed Asset Register

- All assets above the capitalisation threshold shall be uniquely tagged, recorded in the Fixed Asset Register with location, custodian, acquisition date and cost, and physically verified at least annually.
- Client-furnished and leased equipment shall be recorded separately and clearly identified as not owned by the Company.
- Movement of an asset between sites shall be effected by an Asset Transfer Note signed by both the releasing and receiving custodian, with the register updated on the day of transfer.
- Write-off of an asset requires an investigation report, the Project Manager's recommendation and approval at the delegated level, and shall be reflected in both the asset register and the financial accounts.

32. Business Continuity and Contingency Logistics

Given the isolation and seasonal exposure of corridor locations, each site shall maintain a documented logistics contingency capability.

- A minimum thirty (30) day reserve of food, potable water, fuel, medical supplies and essential consumables shall be held at each remote location, ring-fenced from routine consumption and verified monthly.
- Alternative supply routes — road, river, coastal and air — shall be identified in advance for each location, with the trigger points for switching modes documented.
- Contingency stock shall be drawn down only on the written authority of the Project Manager, and replenishment shall be initiated on the same day.
- Logistics support to evacuation, medical evacuation, site shutdown and personnel relocation scenarios shall be rehearsed at least annually, and the exercise findings recorded.
- Where community unrest, landowner grievance or civil disturbance restricts access, movement shall be suspended and resumed only on the joint assessment of the Project Manager, the Security function and Community Affairs.

33. Records, Documentation and Information Management

- All logistics records shall be legible, dated, signed and retained for a minimum of seven (7) years, or such longer period as required by the client contract or Papua New Guinea law.
- Records shall be protected from moisture, insect damage and unauthorised access; electronic records shall be backed up weekly to HQ.
- Only the current version of a controlled form listed at Appendix A may be used. Superseded forms shall be withdrawn from circulation.

- Alteration of a record shall be made by a single ruled line through the error, with the correction, initial and date beside it. Erasure, overwriting, correction fluid and back-dating are prohibited.
- Falsification of any logistics record is a serious misconduct offence and may constitute a criminal offence.
- Commercial and supplier information is confidential and shall not be disclosed outside the Company without authorisation.

34. Reporting Requirements and Performance Indicators

Report	Content and timing
Daily situation input	Fuel dip, critical stock shortfalls, vehicle and vessel availability, journeys completed and outstanding — submitted to the Project Logistics Supervisor.
Weekly logistics report	Stock levels against minimum holdings, fuel consumption and reconciliation, fleet and marine condition, journeys undertaken, shortages, incidents and outstanding requisitions — submitted to the Project Manager and HQ.
Monthly logistics report	Full inventory reconciliation and variance analysis, procurement summary, national content data, fixed asset register update, supplier performance, disposals, expiry watch list, corrective action status.
Quarterly assurance report	HQ audit findings, KPI performance, supplier register changes, contingency stock verification, policy exceptions and continuous improvement actions.
Exception reports	Goods Discrepancy Report, Loss or Damage Report, security incident, environmental spill, and material variance — submitted immediately and in any event within twenty-four (24) hours.

35. Compliance, Assurance and Audit

- Site self-assessment against this Policy shall be completed monthly by the Project Logistics Supervisor and signed by the Project Manager.
- HQ Logistics shall conduct a documented internal audit of each site at least quarterly, covering physical stock, records, procurement files, fuel reconciliation, fleet compliance and asset verification.
- The Company shall cooperate fully with client, regulatory and external audits, and shall provide access to records, storage areas and personnel.
- Audit findings shall be entered in a corrective action register with a named owner and a due date, and shall be tracked to verified closure. Repeat findings shall be escalated to the Chief Executive Officer.
- A whistle-blowing channel shall be available for the confidential reporting of procurement fraud, theft, falsification of records or coercion, and no person making a report in good faith shall suffer detriment.

36. Non-Compliance and Disciplinary Measures

Failure to comply with this Policy shall be addressed under the Company disciplinary procedure and, depending on the gravity of the breach, may result in:

Measure	Typical application
Counselling and retraining	Isolated procedural error without loss or risk.
Written warning	Repeated procedural failure, incomplete records, unauthorised issue.
Final written warning or suspension	Failure to report a loss, unauthorised use of a vehicle, breach of journey management or fuel controls.
Recovery of value	Loss or damage attributable to negligence, to the extent permitted by the employment contract and applicable law.
Summary termination	Theft, fraud, falsification of records, acceptance of an inducement, deliberate breach of a safety-critical control.
Referral to authorities	Conduct constituting a criminal offence, including theft, fraud, bribery and unlawful disposal.

Disciplinary action shall be taken only after a fair investigation in which the person concerned has been informed of the allegation and given a reasonable opportunity to respond, in accordance with the Conduct, Ethics and Misconduct Case Management Standard Operating Procedure.

37. Policy Review and Continuous Improvement

This Policy shall be reviewed every twelve (12) months by the Group Manager, Logistics and Procurement, and earlier where any of the following occurs: a material change in the scope, location or manning of operations; a change in Papua New Guinea law or client contractual requirement; a significant loss, theft, fraud or logistics-related incident; an adverse audit finding; or the mobilisation of a new site within the corridor. All revisions shall be version-controlled, approved by the Chief Executive Officer, and communicated to all affected personnel, who shall acknowledge receipt at Appendix F.

38. Approval and Endorsement

This Logistics, Stores and Supply Chain Management Policy is issued under the authority of the Chief Executive Officer of Southern Cross Strategic Holdings Pte Limited and takes effect from the date of signature. It supersedes all previous logistics and stores instructions issued for the Kikori Development Project and the wider Papua LNG corridor operations.

Appendix A — Register of Controlled Forms

Ref.	Form	Purpose and holder
LOG-F-01	Material Requisition Form (MRF)	Initiates all procurement; raised by requester, approved by Project Manager.
LOG-F-02	Purchase Order (PO)	Company commitment to supplier; raised by Purchasing Officer.
LOG-F-03	Goods Received Note (GRN)	Confirms acceptance into custody; raised by Stores Officer.
LOG-F-04	Goods Discrepancy Report (GDR)	Records shortage, damage or specification failure on receipt.
LOG-F-05	Equipment Issue Form (EIF)	Issues an item to a named individual.
LOG-F-06	Loss or Damage Report (LDR)	Initiates investigation of lost or damaged property.
LOG-F-07	Stock Register / Bin Card	Master inventory record by item code and location.
LOG-F-08	Sensitive Items Register	Serialised control of designated sensitive items.
LOG-F-09	Fuel Logbook and Dip Sheet	Fuel issue, receipt and reconciliation record.
LOG-F-10	Vehicle Movement Log	Records all vehicle movements and odometer readings.
LOG-F-11	Journey Management Plan (JMP)	Authorises and controls road, river and air movements.
LOG-F-12	Pre-Start Inspection Checklist	Daily vehicle, vessel and plant serviceability check.
LOG-F-13	Asset Transfer Note	Records movement of an asset between locations or custodians.
LOG-F-14	Asset Disposal Form	Authorises and records disposal or destruction.
LOG-F-15	Stores Handover Certificate	Formal handover between custodians.
LOG-F-16	Hazardous Substances Register	Lists hazardous substances held and their Safety Data Sheets.
LOG-F-17	Key and Access Register	Controls issue and return of keys and access cards.
LOG-F-18	Single Source Justification	Records the basis for procurement without competitive quotation.

Appendix B — Procurement Approval Thresholds

Thresholds are expressed in Papua New Guinea Kina and shall be confirmed by the Chief Executive Officer on issue and reviewed annually against inflation and contract value.

Value band (PGK)	Quotations required	Approval	Documentation
Up to 2,000	One	Project Logistics Supervisor	MRF, PO, GRN
2,001 – 20,000	Two written	Project Manager	MRF, comparison sheet, PO, GRN
20,001 – 100,000	Three written	Group Manager, Logistics and Procurement	MRF, evaluation record, PO, GRN
Above 100,000	Three written and formal evaluation	Chief Executive Officer	Full tender file and recommendation
Emergency (any value)	As available	Project Manager verbal, written within 24 hours	Written justification and retrospective PO

Reporting and investigation thresholds: any single stock variance exceeding PGK 1,000 in value, any variance in a sensitive item regardless of value, and any fuel reconciliation variance exceeding two (2) per cent of throughput shall be reported to HQ within twenty-four (24) hours.

Appendix C — Personal Kit Matrix

Scales below are indicative and shall be confirmed by the Project Manager for each site and season. Replacement is on a fair-wear-and-tear, one-for-one exchange basis.

Item	Guard	Supervisor	K9 Handler	Replacement cycle
Uniform set (shirt and trousers)	3	3	3	12 months
Safety boots	1 pair	1 pair	1 pair	12 months
Wet weather jacket	1	1	1	24 months
Hat / cap	1	1	1	12 months
Belt and accessories	1 set	1 set	1 set	24 months
High-visibility vest	1	1	1	12 months
Identification card and lanyard	1	1	1	On expiry
Torch and batteries	1	1	1	As required
Notebook and pen	1	1	1	As required
Radio (serialised, on issue)	Per post	1	1	On return
Lifejacket (marine tasking)	1	1	1	On defect
Handler kit (lead, harness, muzzle, treat pouch)	—	—	1 set	12 months

Appendix D — Minimum Stock Holding Levels

Category	Remote sites	Kerema HQ warehouse
Rations and dry stores	30 days	45 days
Potable water and treatment	30 days	45 days
Generator and vehicle fuel	30 days	As tankage permits
Medical consumables	60 days	90 days
K9 feed and veterinary consumables	30 days	60 days
Uniform and PPE (replacement float)	10 per cent of manning	20 per cent of manning
Batteries and communications consumables	30 days	60 days
Vehicle and vessel critical spares	Per criticality list	Per criticality list

Appendix E — Logistics Performance Indicators

Indicator	Target	Reported
Stock accuracy at monthly count	≥ 98 per cent	Monthly
Stock-outs of critical items	Nil	Weekly
Requisition to delivery cycle time	Within agreed lead time ≥ 90 per cent	Monthly
Purchase orders raised before supply	100 per cent	Monthly
Fuel reconciliation variance	≤ 2 per cent	Weekly
Vehicle and vessel availability	≥ 90 per cent	Weekly
Journeys with approved JMP	100 per cent	Weekly
Overdue corrective actions from audit	Nil	Quarterly
Procurement value placed with national and landowner suppliers	Per contract commitment	Quarterly
Logistics-related recordable incidents	Nil	Monthly

Appendix F — Acknowledgement of Receipt and Understanding

I acknowledge that I have received, read and understood the Logistics, Stores and Supply Chain Management Policy (SCSH-LOG-POL-001). I understand that Company and client property issued to me is held on trust, that I am personally accountable for it, and that I am required to report any loss, damage or irregularity without delay. I understand that breach of this Policy may result in disciplinary action up to and including termination of employment and referral to the appropriate authorities.
