SEA MARSHAL SECURITY POLICY

Kikori Operational Area — Papua LNG Project Corridor

Gulf Province, Papua New Guinea

Document Reference: SCSH-SEC-MAR-001

Version 2.0 | Effective 01 August 2026

Classification: RESTRICTED — Internal & Client Use Only

Document Control

Document Title	Sea Marshal Security Policy
Document Reference	SCSH-SEC-MAR-001
Version	2.0
Status	Approved for Issue
Effective Date	01 August 2026
Next Review Date	31 July 2027 (or upon material change to the operating environment)
Owner	Maritime Security Commander (MSC), Kikori Operational Area
Approving Authority	Director of Operations, Southern Cross Strategic Holdings Pte Limited
Applies To	All Sea Marshal personnel, marine operators and contracted maritime partners
Classification	RESTRICTED — Internal & Client Use Only

Revision History

Version	Date	Summary of Change	Author / Reviewer
1.0	2025	Initial issue.	Maritime Security Division
2.0	Aug 2026	Full review, formalisation and expansion. Aligned to current Papua LNG development context; added threat environment, rules on the use of force, human-rights framework (VPSHR), HSE, environmental protection, community grievance mechanism and authority interfaces.	Maritime Security Commander

1. Purpose

This Sea Marshal Security Policy (“the Policy”) establishes the principles, protocols, responsibilities and operational standards governing the Sea Marshal Team operating under Southern Cross Strategic Holdings Pte Limited (“the Company”) within the Kikori Operational Area of the Papua LNG project corridor, Gulf Province, Papua New Guinea.

The Policy is issued to ensure that maritime and riverine security operations are conducted safely, lawfully, professionally and to a consistent standard across all deployments. Specifically, the Policy aims to secure:

- the protection of personnel, assets and cargo transported along the Kikori seashore, coastal approaches, estuaries and the upstream Kikori River;
- the safe escort, boarding and protection of vessels during maritime and riverine operations;
- full compliance with the laws of Papua New Guinea, applicable maritime security standards and the requirements of the Company’s clients;
- the prevention and deterrence of piracy, theft, armed robbery, sabotage, unauthorised boarding and hostile interference; and
- respectful, lawful and constructive engagement with landowners and coastal communities within the operational area.

2. Operating Context

The Papua LNG project is a nationally significant petroleum development operated by TotalEnergies in joint venture with ExxonMobil, Santos and JX Nippon, with participating interests held on behalf of the State through Kumul Petroleum Holdings Limited and the Mineral Resources Development Company following the Final Investment Decision. The project’s upstream facilities and associated marine and riverine logistics are concentrated in the Kikori and wider Gulf Province area.

At the time of issue, the project is advancing toward Final Investment Decision, with engineering, procurement and construction activity intensifying and a Government-led Development Forum having convened landowners, the Gulf Provincial Government and Central Province stakeholders. This period is characterised by rising vessel traffic, mobilisation of construction cargo and equipment, heightened community expectation regarding benefits and employment, and a corresponding elevation of security, safety and reputational risk across the marine corridor.

Accordingly, Sea Marshal operations are to be delivered with heightened vigilance, strict lawfulness and a strong emphasis on community relations, so that the security posture supports rather than obstructs the safe progression of the project.

3. Scope

3.1 Persons Covered

This Policy applies to all:

- Sea Marshal personnel and boarding officers;
- maritime security commanders, deputies, supervisors and team leaders;
- vessel operators, boat skippers, marine patrol crews and security escorts;

- Company marine support staff; and
- contracted partners and sub-contractors engaged in Kikori maritime and riverine logistics.

3.2 Operations Covered

- Sea and river escort of barges, cargo ships, fuel tankers and crew-transfer boats;
- patrols along the seashore, coastal zones, estuaries and the upstream Kikori River;
- static security at jetties, landing sites, anchorages and project marine assets;
- vessel boarding, search and clearance operations; and
- emergency response operations, including search and rescue, medical evacuation and conflict mitigation.

4. Definitions and Abbreviations

Company	Southern Cross Strategic Holdings Pte Limited.
Client	The project operator or contracting entity to whom maritime security services are provided.
Sea Marshal	A trained and vetted security officer deployed to protect vessels, cargo and personnel afloat.
MSC	Maritime Security Commander — the senior officer accountable for maritime security operations.
ERC	Emergency Response Channel.
ISPS Code	International Ship and Port Facility Security Code.
NMSA	PNG National Maritime Safety Authority.
PPE	Personal Protective Equipment.
RoE	Rules of Engagement governing the graduated use of force.
SAR	Search and Rescue.
SITREP	Situation Report.
VPSHR	Voluntary Principles on Security and Human Rights.

5. Legal and Regulatory Framework

All operations conducted under this Policy must comply with the applicable laws of Papua New Guinea and with recognised maritime security standards, including:

- the Merchant Shipping Act and associated maritime legislation of Papua New Guinea;
- the Criminal Code Act of Papua New Guinea;
- the Security (Protection) Industry Act and licensing requirements for private security providers;
- the International Ship and Port Facility Security (ISPS) Code;
- regulations and directions of the PNG National Maritime Safety Authority (NMSA);
- client safety, security and compliance requirements; and
- the operational directives and standard operating procedures of the Company.

Sea Marshals must at all times respect the sovereignty of Papua New Guinea, its territorial and customary marine rights, indigenous community agreements and applicable environmental

protections. Where the requirements of this Policy and any binding law conflict, the law prevails and the matter is to be escalated to the MSC without delay.

6. Command and Control

6.1 Chain of Command

Authority flows through a single, unambiguous chain of command:

1. Director of Operations — Southern Cross Strategic Holdings Pte Limited;
2. Maritime Security Commander (MSC);
3. Deputy MSC — Kikori Region;
4. Sea Marshal Team Leaders;
5. Sea Marshals and Boarding Officers;
6. Boat Skippers and Marine Operators.

Every member is accountable to the person immediately above them. No member may act outside their delegated authority except where immediately necessary to protect life, in which case the action must be reported at the earliest opportunity.

6.2 Communications

- VHF marine radio, with CH16 reserved for distress, safety and calling, and a designated working channel (e.g. CH77) for operational traffic;
- satellite telephone for deep-water and out-of-range communication;
- a dedicated Emergency Response Channel (ERC) monitored continuously by the Operations Room;
- daily Situation Reports (SITREPs) submitted to the MSC; and
- radio checks at the start of every patrol and escort, with communications failure treated as a stop-work trigger.

7. Operational Objectives

- Protect cargo and personnel transiting between offshore vessels, river ports and onshore facilities;
- conduct visible, lawful deterrent patrols to reduce piracy and criminal activity;
- ensure the safe movement of vessels through identified high-risk zones and choke points;
- maintain surveillance and situational awareness along the Kikori River and coastal approaches;
- de-escalate, through non-lethal and lawful means, any landowner or community interference; and
- respond rapidly and proportionately to emergencies, collisions, medical incidents and security breaches.

8. Threat and Risk Environment

Maritime and riverine operations in the Kikori corridor present a distinct risk profile that all personnel must understand and continuously reassess. Recognised threats and hazards include:

- **Security threats:** armed robbery at anchorage, opportunistic theft of cargo and equipment, unauthorised boarding, sabotage of vessels or marine infrastructure, and community blockades or interference arising from landowner and benefit-sharing disputes.
- **Navigational and environmental hazards:** shifting river channels, sandbars, submerged debris and logs, strong tidal flows, poor visibility, and rapidly changing weather and sea state common to the Gulf of Papua.
- **Safety hazards:** man-overboard, vessel collision, fire, fuel or cargo spill, and medical emergencies remote from shore-based care.

A documented risk assessment must be completed before every escort and before any patrol into an area of elevated risk. Where risk cannot be reduced to an acceptable level, the operation is to be postponed and the matter escalated to the MSC. Risk assessments are living documents and must be revised whenever conditions change.

9. Personnel Requirements

9.1 Selection Criteria

- Valid PNG security industry certification and licensing;
- a maritime, naval or relevant military background, or equivalent marine experience;
- physical fitness to operate in demanding coastal and riverine conditions;
- competent swimming ability;
- a satisfactory background check and no disqualifying criminal record; and
- demonstrated psychological stability and sound judgement under pressure.

9.2 Training Requirements

All Sea Marshals must complete, and remain current in, the following training before deployment:

- vessel boarding, search and clearance procedures;
- maritime tactical movement and escort techniques;
- weapons handling and safety, where and only where authorised under PNG law;
- non-lethal engagement, de-escalation and negotiation;
- riverine navigation and hazard awareness;
- sea survival, man-overboard recovery and life-saving appliances;
- first aid and cardiopulmonary resuscitation (CPR);
- Voluntary Principles on Security and Human Rights (VPSHR) awareness; and
- cultural awareness training specific to Gulf Province communities.

10. Operational Protocols

10.1 Patrol Operations

Patrols shall cover the Kikori seashore perimeter, upstream river checkpoints, identified crime hotspots, cargo vessel anchorages and supply routes to the project site. Three categories of patrol are recognised:

- **Routine patrols** — scheduled daily movements providing visible deterrence and area familiarity;

- **Rapid-response patrols** — triggered by an incident, alarm or intelligence indicator; and
- **Joint patrols** — conducted with PNG security forces or NMSA where required and lawfully coordinated.

10.2 Vessel Escort Operations

Every escort shall include, as a minimum:

- a documented pre-departure risk assessment;
- an onboarding security and safety briefing for the escorted crew;
- continuous surveillance and a maintained 360-degree perimeter watch;
- the establishment of safe lanes through river bends, narrow channels and high-risk zones;
- accurate documentation of all vessel interactions and positions; and
- a structured debrief on completion, with lessons recorded.

10.3 Boarding Protocols

Sea Marshals may board a vessel only for a lawful and authorised purpose, including cargo verification, security inspection, crew verification, threat identification or clearance to proceed. All boarding must:

- be authorised by the Team Leader or MSC and recorded before it commences;
- follow the approved safety, communication and personal-protection procedures;
- be conducted with courtesy and the minimum necessary intrusion; and
- be documented, including the identities present, purpose, findings and outcome.

11. Use of Force and Rules of Engagement

The use of force is strictly governed by the laws of Papua New Guinea and by the Company's Rules of Engagement. Force is a last resort. The following principles are mandatory and are not subject to local variation:

- **Legality** — force may be used only where permitted by law;
- **Necessity** — force may be used only when no lawful alternative remains;
- **Proportionality** — any force used must be the minimum reasonably necessary and proportionate to the threat;
- **Non-lethal first** — verbal warnings, presence, de-escalation and non-lethal methods must be exhausted before any escalation; and
- **Defence of life** — lethal force is permissible only where there is an imminent threat to life and no lesser means will suffice.

A graduated force continuum applies: professional presence → verbal command and de-escalation → non-lethal control →, and only as an absolute last resort in defence of life, lethal force. Force must cease the moment the threat is neutralised. Where firearms are carried, they may be issued, held and used strictly in accordance with PNG law and the conditions of the applicable licence and client agreement.

Every use-of-force incident — whether or not injury results — must be reported immediately to the MSC, followed by a written report within the timeframes in Section 13, and is subject to investigation.

12. Human Rights and Community Engagement

12.1 Voluntary Principles on Security and Human Rights

The Company aligns its security practice with the Voluntary Principles on Security and Human Rights (VPSHR). All Sea Marshals shall respect the dignity and human rights of every person, exercise restraint, and never engage in, condone or conceal any act of intimidation, harassment, abuse or degrading treatment. Vulnerable persons, women and children shall be treated with particular care.

12.2 Interaction with Local Communities

Given the sensitivity of landowner and benefit-sharing matters across the Papua LNG corridor, Sea Marshals shall:

- maintain genuine respect for local customs and for land and sea ownership;
- avoid any action that provokes or escalates tension;
- report all landowner-related incidents promptly and accurately;
- support peaceful dialogue and refer disputes to the appropriate community-liaison channel; and
- never take sides in local disputes or use security resources for any purpose outside this Policy.

12.3 Community Grievance Mechanism

Any complaint by a community member concerning the conduct of Sea Marshal personnel shall be received respectfully, recorded, acknowledged and referred through the Company's grievance mechanism for impartial handling. No person raising a grievance in good faith shall suffer retaliation.

13. Incident Management and Reporting

13.1 Classification of Incidents

Level	Description
Level 1	Non-threatening — mechanical issues, minor disturbances, administrative matters.
Level 2	Suspicious activity, attempted approach or probing of a vessel or asset.
Level 3	Hostile boarding attempt, armed confrontation or serious threat to persons.
Level 4	Fatality, major attack, kidnapping, sabotage or loss of a vessel or major asset.

13.2 Reporting Requirements

- Immediate radio report to the MSC on occurrence of any incident;
- a SITREP submitted within 30 minutes of the event stabilising;
- a written incident report within 12 hours; and
- formal investigation and documentation for all Level 2 to Level 4 events, with client notification where required.

13.3 Emergency Situations

On any emergency, Sea Marshals shall activate the Emergency Response Channel and, as applicable, initiate first aid and casualty evacuation, Search and Rescue (SAR) procedures, and coordination with the NMSA, PNG Defence Force maritime element and other competent authorities.

14. Asset Protection Measures

14.1 Equipment and Gear

Each team shall deploy with, at minimum: VHF radios, binoculars, GPS devices, torches, body-worn cameras, first-aid kits, approved life jackets, boarding equipment and emergency flares. All equipment is to be inspected and signed for before each deployment.

14.2 Vessel Hardening

Security modifications to protected vessels may include anti-boarding barriers, secured and controlled access points, backup communications, reinforced bridge and engine-room access, and adequate night illumination.

15. Health, Safety and Environment

15.1 Safety Protocols

- Mandatory PPE, including life jackets, at all times afloat;
- no patrol or escort without a current weather and sea-state assessment;
- enforced speed limits in narrow river channels and near communities;
- zero tolerance for alcohol and drugs, with testing as required;
- verification of crew safety briefings before departure; and
- daily inspection of vessels, engines, fuel systems and life-saving equipment.

15.2 Environmental Protection

Operating within an ecologically sensitive delta and coastal environment adjacent to LNG infrastructure, all personnel shall prevent pollution, avoid fuel and oil spills, dispose of waste responsibly, respect fishing grounds and protected areas, and report any environmental incident immediately. Environmental stewardship is a condition of continued operation and a protection of the Company's and the client's reputation.

16. Confidentiality and Information Protection

Sea Marshals shall protect all sensitive information entrusted to them, including cargo movement schedules, operational routes, communications, client information and security strategies or vulnerabilities. Unauthorised disclosure, photography or dissemination is strictly prohibited and may constitute a criminal offence as well as grounds for dismissal.

17. Anti-Corruption and Conflicts of Interest

The Company maintains zero tolerance for bribery, extortion, facilitation payments, theft, collusion and any abuse of position for personal gain. Sea Marshals shall neither solicit nor accept any payment,

gift or favour in connection with their duties, and shall declare any conflict of interest to the MSC. All such conduct must be reported and will be investigated and, where substantiated, referred for disciplinary and legal action.

18. Discipline and Accountability

Conduct that undermines the safety, lawfulness or integrity of operations constitutes an offence under this Policy, including:

- disobeying lawful orders;
- unsafe handling of vessels, weapons or equipment;
- unauthorised or excessive use of force;
- theft, corruption or collusion;
- any breach of the laws of Papua New Guinea; and
- poor conduct toward communities, crews or clients.

Penalties are applied fairly and proportionately and range from formal warning to suspension, termination and referral to the authorities for prosecution.

19. Review and Amendment

This Policy shall be reviewed at least every twelve (12) months, and additionally whenever the operating environment materially changes. Reviews shall reflect operational experience, incident learnings, changes in PNG law and NMSA direction, and consultation with the client and relevant authorities. All amendments are subject to approval by the Director of Operations and are to be incorporated into the Company's broader risk-management framework.

20. Approval and Authorisation

This Policy is approved for issue and takes effect on the date shown in the document control table. It supersedes all previous versions.
